Complexity and Contradiction in Architecture Robert Venturi, 1977-01-01 Complexity and Contradiction in Architecture is the first in a series of occasional papers concerned with the theoretical background of modern architecture Unlike other Museum publications in architecture and design the series will be independent of the Museum's exhibition program and will explore ideas too complex for presentation in exhibition form and authors will represent no single professional group According to the author this book is both an attempt at architectural criticism and an apologia an explanation indirectly of his work The examples chosen reflect his partiality for certain eras Mannerist Baroque and Rococo especially Separate chapters cover concepts such as nonstraightforward architecture complexity and contradiction vs simplification or picturesqueness contradictory levels of meaning and use in architecture and the double functioning element Also discussed are the complexity and contradiction that develops from the program of the building and reflects the inherent complexities and contradictions of living The final chapter presents photographs and descriptions of the author's work

The Architecture of Paul Rudolph Timothy M. Rohan, 2014-07-10 Equally admired and maligned for his remarkable Brutalist buildings Paul Rudolph 1918-1997 shaped both late modernist architecture and a generation of architects while chairing Yale's department of architecture from 1958 to 1965 Based on extensive archival research and unpublished materials *The Architecture of Paul Rudolph* is the first in depth study of the architect neglected since his postwar zenith Author Timothy M Rohan unearths the ideas that informed Rudolph's architecture from his Florida beach houses of the 1940s to his concrete buildings of the 1960s to his lesser known East Asian skyscrapers of the 1990s Situating Rudolph within the architectural discourse of his day Rohan shows how Rudolph countered the perceived monotony of mid century modernism with a dramatically expressive architecture for postwar America exemplified by his Yale Art and Architecture Building of 1963 famously clad in corrugated concrete The fascinating story of Rudolph's spectacular rise and fall considerably deepens longstanding conceptions about postwar architecture Rudolph emerges as a pivotal figure who anticipated new directions for architecture ranging from postmodernism to sustainability
