Science and the Economic Crisis Francesco Sylos Labini, 2016-03-21 This book not only explores the ways in which the economic crisis and associated austerity policies have adversely impacted the physical and human infrastructure and conduct of scientific research but also considers how science can help us to understand the crisis and provide original solutions Starting with a detailed but accessible analysis of the scientific method and the nature of scientific prediction the book proceeds to address the failure to forecast the economic crisis and the origins of the continuing inertia in economic policy and theory Attention is drawn in particular to the shortcomings of neoclassical economics in terms of its description of the economic system as being mechanical in nature and characterized by equilibrium This perspective mirrors the limitations and outdated ideas of nineteenth century physics which the book contrasts with the insights offered by modern physics The impact of neoliberal ideologies on scientific research is also discussed in detail highlighting their stifling effect on innovation and diversification In closing the book emphasizes the need for state intervention to guide and support scientific research as the core engine of economic development that will deliver a sustainable future Conceptual Perspectives in Quantum

Chemistry Jean-Louis Calais, Eugene S. Kryachko, 2012-12-06 The rivers run into the sea yet the sea is not full Ecclesiastes What is quantum chemistry The straightforward answer is that it is what quantum chemists do But it must be admitted that in contrast to physicists and chemists quantum chemists seem to be a rather ill defined category of scientists Quantum chemists are more or less physicists basically theoreticians more or less chemists and by large computationists But first and foremost we quantum chemists are conscious beings We may safely guess that quantum chemistry was one of the first areas in the natural sciences to lie on the boundaries of many disciplines We may certainly claim that quantum chemists were the first to use computers for really large scale calculations The scope of the problems which quantum chemistry wishes to answer and which by its unique nature only quantum chemistry can answer is growing daily Retrospectively we may guess that many of those problems meet a daily need or are say technical in some sense The rest are fundamental or conceptual The daily life of most quantum chemists is usually filled with grasping the more or less technical problems But it is at least as important to devote some time to the other kind of problems whose solution will open up new perspectives for both quantum chemistry itself and for the natural sciences in general **Physics in Perspective** National Academy of Sciences
