Prediction of Defects in Material Processing Mircea Predeleanu, 2002
Processing M. Predeleanu, 2004 Taken from a September 2002 international conference 31 selected papers consider methods for predicting and avoiding the occurrence of defects in manufactured products Major topics include microstructural evolutions during processing induced properties in materials damage modeling and fracture criteria instability analysis characterization of formability predictive methods and numerical techniques and the influence of defects on the integrity of structures The volume covers metal alloys ceramics polymers and composites and both conventional and new materials are discussed Distributed in the U S by Stylus Publishing Annotation 2004 Book News Inc Portland OR booknews com
Materials Processing Defects M. Predeleanu, S.K. Ghosh, 1995-02-24 The technological field of defects and more appropriately avoidance of them is very current in perhaps all sectors of the manufacturing industry This is particularly important to reduce minimize waste everywhere to address lean production procedures The recent advances in finite plasticity and viscoplasticity damage modelling instability theories fracture modelling computer numerical techniques and process simulation etc offer new approaches and tools for defect prediction analyses and guidelines for designing components to be manufactured by traditional and emerging process technologies This volume contains contributions from well known researchers and experts in the field presenting an up to date overview of advances in this area Subjects covered include micro and macro scale observation of defects localization and instability analysis damage modelling and fracture criteria defect prediction methods design considerations to avoid defects
Advanced Methods in Materials Processing Defects M. Predeleanu, P. Gilormini, 1997-06-18 This collection of papers focus on advanced methods for predicting and avoiding the occurrence of defects in manufactured products A new feature is included namely the influence of the processing induced defects on the integrity of structures The following topics are developed damage modeling damage evaluation and rupture strain localization and instability analysis formability characterization prediction of shape inaccuracies influence of defects on structural integrity The main manufacturing operations are covered and various materials are examined such as new and conventional metal alloys ceramics polymers and composites
