Carlyle-Moses, Shin'ichi Iida, Beate Michalzik, Kazuki Nanko, Alexander Tischer, 2020-02-05 The United Nations has declared 2018-2028 as the International Decade for Action on Water for Sustainable Development This is a timely designation In an increasingly thirsty world the subject of forest water interactions is of critical importance to the achievement of sustainability goals The central underlying tenet of this book is that the hydrologic community can conduct better science and make a more meaningful impact to the world's water crisis if scientists are 1 better equipped to utilize new methods and harness big data from either or both high frequency sensors and long term research watersheds and 2 aware of new developments in our process based understanding of the hydrological cycle in both natural and urban settings Accordingly this forward looking book delves into forest water interactions from multiple methodological statistical and process based perspectives with some chapters featuring data sets and open source R code concluding with a chapter on future forest hydrology under global change Thus this book describes the opportunities of convergence in high frequency sensing big data and open source software to catalyze more comprehensive understanding of forest water interactions The book will be of interest to researchers graduate students and advanced undergraduates in an array of disciplines including hydrology forestry ecology botany and environmental engineering **Role of the Southern Ocean in Atmospheric pCO₂ Change: Observations, Simulations and Paleorecords** Zhifang Xiong, Di Qi, Xu Zhang, Thomas Algeo, Jun Zhao, 2025-01-02 The Southern Ocean

plays a key role in atmospheric CO₂ sequestration accounting for 40-50% of the anthropogenic CO₂ absorbed by the modern ocean The size of this sink is attributed to strong water mass sinking i.e. mode intermediate water and bottom water formation which transports carbon to the mid and deep ocean thus isolating it from the atmosphere for centuries The Southern Ocean also played a critical role in atmospheric pCO₂ variations in the geologic past on both orbital and millennial timescales Moreover the Southern Ocean modulates atmospheric and oceanic circulation in the tropics remotely influencing low latitude atmospheric CO₂ exchange Thus the Southern Ocean is a key component of the global climate system whose operation must be better understood at a range of timescales in order to accurately assess its effects on atmospheric pCO₂ in the future This Research Topic will consist of a set of cutting edge investigations of the processes and mechanisms of Southern Ocean influence on atmospheric pCO₂ and global climate change *Pkg Acp-Chemistry 105* Gillette, 2002-09-01 **Pkg Acp-Gen**
