Plague Time How Stealth Infections Cause Cancers Heart Disease And Other Deadly Ailments:

Plague Time Paul W. Ewald, 2000 In *Plague Time* Ewald puts forth an astonishing and profound argument that challenges our modern beliefs about disease it is germs not genes that mold our lives and cause our deaths Building on the recently recognized infectious origins of ulcers miscarriages and cancers he draws together a startling collection of discoveries that now implicate infection in the most destructive chronic diseases of our time such as heart disease Alzheimer's and schizophrenia BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Cancer and the Search for Selective Biochemical Inhibitors E.J. Hoffman, 2007-06-25 The world of medicine has become splintered into two factions that of orthodoxy and its counterpart alternative or complementary medicine. A problem with alternative medicine is of course that of anecdote and hearsay. The solution the disclosure in an unassailable fashion of the underlying biochemical principles for alternative cancer therapy.

Catching Cancer Claudia Cornwall, 2013-03-22 Catching Cancer introduces readers to the investigators who created a medical revolution a new way of looking at cancer and its causes. Featuring interviews with notable scientists such as Harald zur Hausen, Barry Marshall, Robin Warren and others, the book tells the story of their struggles, their frustrations and finally the breakthroughs that helped form some of the most profound changes in the way we view cancer. Claudia Cornwall takes readers inside the lab to reveal the long and winding path to discoveries that have changed and continue to alter the course of medical approaches to one of the most confounding diseases mankind has known. She tells the stories of families who have benefited from this new knowledge of the researchers who made the revolution happen and the breakthroughs that continue to change our lives. For years we've thought cancer was the result of lifestyle choices, environmental factors or genetic mutations. But pioneering scientists have begun to change that picture. We now know that infections cause 20 percent of cancers including liver, stomach and cervical cancer which together kill almost 1.8 million people every year. While the idea that you can catch cancer may sound unsettling, it is actually good news. It means antibiotics and vaccines can be used to combat this most dreaded disease. With this understanding we have new methods of preventing cancer and perhaps we may be able to look forward to a day when we will no more fear cancer than we do polio or rubella.

Plague Time Paul Ewald, 2002-01-08 According to conventional wisdom, our genes and lifestyles are the most important causes of the most deadly ailments of our time. Conventional wisdom may be wrong. In this controversial book, the eminent biologist Paul W. Ewald offers some startling arguments. Germs appear to be at the root of heart disease, Alzheimer's, schizophrenia, many forms of cancer and other chronic diseases. The greatest threats to our health come not from sensational killers such as Ebola, West Nile virus and super virulent strains of influenza, but from agents that are already here causing long term infections which eventually lead to debilitation and death. The medical establishment has largely ignored the evidence that implicates these germs to the detriment of our public health. New evolutionary theories are available which explain how germs function and offer opportunities for controlling these modern plagues if we are willing to listen to them. Plague Time is an eye opening exploration of the revolutionary new understanding of disease that may set the course of medical research for the twenty first century.

Epidemic Robert Baker, 2007 At the threshold of the third millennium, the human race is more vulnerable to mass epidemics.

than at any other time in history Cases of bird flu MRSA influenza and bioterrorism have never been higher Differences in travel and social behavior spread infections more widely and some infectious agents including tuberculosis and HIV are becoming resistant to nearly all available antibiotics With changes in climate diseases are either being described for the first time or even appearing in previously unaffected areas Encompassing these rapid developments this study presents the radical theory that humans are themselves a form of epidemic Humans have been shaped by the effects of disease and are physically composed of an amalgamation of infectious tissue Most alarmingly of all it shows that the human race is the most destructive epidemic on the face of the planet
