Hopp,Michael J. Owren,Christopher S. Evans,2012-12-06 The last decades have brought a significant increase in research on acoustic communication in animals Publication of scientific papers on both empirical and theoretical aspects of this topic has greatly increased and a new journal Bioacoustics is entirely devoted to such articles Coupled with this proliferation of work is a recognition that many of the current issues are best approached with an interdisciplinary perspective requiring technical and theoretical contributions from a number of areas of inquiry that have traditionally been separated With the notable exception of a collection edited by Lewis 1983 there have been few volumes predominately focused on technical issues in comparative bioacoustics to follow up the early works edited by Lanyon and Tavolga 1960 and Busnel 1963 It was the tremendous growth of expertise concerning this topic in particular that provided the initial impetus to organize this volume which attempts to present fundamental information from both theoretical and applied aspects of current bioacoustics research While a completely comprehensive review would be impractical this volume offers a basic treatment of a wide variety of topics aimed at providing a conceptual framework within which researchers can address their own questions Each presentation is designed to be useful to the broadest possible spectrum of researchers including both those currently working in any of the many and diverse disciplines of bioacoustics and others that may be new to such studies
