

# Poisson Approximation to Binomial Distribution

- When the value of  $n$  is large and the value of  $p$  is close to 0, the binomial distribution with parameters  $n$  and  $p$  can be approximated by a Poisson distribution with mean  $np$ .
- Proof: For a binomial distribution with  $\lambda = np$ , we have

$$f(x|n, p) = \frac{n(n-1)\cdots(n-x+1)}{x!} p^x (1-p)^{n-x}$$

$$= \frac{\lambda^x}{x!} \cdot \frac{n}{n} \cdot \frac{n-1}{n} \cdots \frac{n-x+1}{n} \left(1 - \frac{\lambda}{n}\right)^n \left(1 - \frac{\lambda}{n}\right)^{-x}$$

$$\text{As } n \rightarrow \infty, \text{ then } p \rightarrow 0, \text{ then } \lim_{n \rightarrow \infty} \frac{n}{n} \cdot \frac{n-1}{n} \cdots \frac{n-x+1}{n} \left(1 - \frac{\lambda}{n}\right)^{-x} = 1$$

$$\text{Also, } \lim_{n \rightarrow \infty} \left(1 - \frac{\lambda}{n}\right)^n = e^{-\lambda}$$

$$\therefore f(x|n, p) \rightarrow \frac{e^{-\lambda} \lambda^x}{x!} \quad (\text{for every fixed positive integer } x)$$

$$\text{For } x = 0, f(x|n, p) = (1-p)^n = \left(1 - \frac{\lambda}{n}\right)^n.$$

Barbour, Louis Hsiao Yun Chen, 2005 A common theme in probability theory is the approximation of complicated probability distributions by simpler ones the central limit theorem being a classical example Stein's method is a tool which makes this possible in a wide variety of situations Traditional approaches for example using Fourier analysis become awkward to carry through in situations in which dependence plays an important part whereas Stein's method can often still be applied to great effect In addition the method delivers estimates for the error in the approximation and not just a proof of convergence Nor is there in principle any restriction on the distribution to be approximated it can equally well be normal or Poisson or that of the whole path of a random process though the techniques have so far been worked out in much more detail for the classical approximation theorems This volume of lecture notes provides a detailed introduction to the theory and application of Stein's method in a form suitable for graduate students who want to acquaint themselves with the method It includes chapters treating normal Poisson and compound Poisson approximation approximation by Poisson processes and approximation by an arbitrary distribution written by experts in the different fields The lectures take the reader from the very basics of Stein's method to the limits of current knowledge **Business Statistics** Ken Black, 2009-12-02 Help your students see the light With its myriad of techniques concepts and formulas business statistics can be overwhelming for many students They can have trouble recognizing the importance of studying statistics and making connections between concepts Ken Black's fifth edition of Business Statistics For Contemporary Decision Making helps students see the big picture of the business statistics course by giving clearer paths to learn and choose the right techniques Here's how Ken Black helps students see the big picture Video Tutorials In these video clips Ken Black provides students with extra learning assistance on key difficult topics Available in WileyPLUS Tree Taxonomy Diagram Tree Taxonomy Diagram for Unit 3 further illustrates the connection between topics and helps students pick the correct technique to use to solve problems New Organization The Fifth Edition is reorganized into four units which will help professor teach and students see the connection between topics WileyPLUS WileyPLUS provides everything needed to create an environment where students can reach their full potential and experience the exhilaration of academic success In addition to a complete online text online homework and instant feedback WileyPLUS offers additional Practice Problems that give students the opportunity to apply their knowledge and Decision Dilemma

**Review and Implementation of Credit Risk Models of the Financial Sector Assessment Program**, 2006 The paper presents the basic Credit Risk model and proposes some modifications This model could be useful in the stress testing financial sector assessments process as a benchmark for credit risk evaluations First we present the setting and basic definitions common to all the model specifications used in this paper Then we proceed from the simplest model based on Bernoulli distributed default events and known default probabilities to the fully fledged Credit Risk implementation The latter is based on the Poisson approximation and uncertain default probabilities determined by mutually independent risk factors As an extension we present a Credit Risk specification with correlated risk factors as in Giese 2003 Finally we illustrate the characteristics
