## **Riemannian Geometry During The Second Half Of The Twentieth Century:**

**Riemannian Geometry During the Second Half of the Twentieth Century** Marcel Berger, 2000 During its first hundred years Riemannian geometry enjoyed steady but undistinguished growth as a field of mathematics In the last fifty years of the twentieth century however it has exploded with activity Berger marks the start of this period with Rauch's pioneering paper of 1951 which contains the first real pinching theorem and an amazing leap in the depth of the connection between geometry and topology Since then the field has become so rich that it is almost impossible for the uninitiated to find their way through it Textbooks on the subject invariably must choose a particular approach thus narrowing the path In this book Berger provides a remarkable survey of the main developments in Riemannian geometry in the second half of the last fifty years One of the most powerful features of Riemannian manifolds is that they have invariants of at least three different kinds There are the geometric invariants topology the metric various notions of curvature and relationships among these There are analytic invariants eigenvalues of the Laplacian wave equations Schrödinger equations There are the invariants that come from Hamiltonian mechanics geodesic flow ergodic properties periodic geodesics Finally there are important results relating different types of invariants To keep the size of this survey manageable Berger focuses on five areas of Riemannian geometry Curvature and topology the construction of and the classification of space forms distinguished metrics especially Einstein metrics eigenvalues and eigenfunctions of the Laplacian the study of periodic geodesics and the geodesic flow Other topics are treated in less detail in a separate section While Berger's survey is not intended for the complete beginner one should already be familiar with notions of curvature and geodesics he provides a detailed map to the major developments of Riemannian geometry from 1950 to 1999 Important threads are highlighted with brief descriptions of the results that make up that thread This supremely scholarly account is remarkable for its careful citations and voluminous bibliography If you wish to learn about the results that have defined Riemannian geometry in the last half century start with this book Sitzungsberichte der Sächsischen Akademie der Wissenschaften zu Leipzig, 1999 Annales Scientifiques de l'École Normale Supérieure École normale supérieure (France), 1998 Abstracts of Papers Presented to the American Mathematical Society American Mathematical Society, 1999 Mathematical Reviews, 2007 Tokyo Journal of Mathematics, 2007 Mathematics Journal of Toyama University, 2002 **Bulletin of the American Mathematical Society**, 2003 **Mathematics of Computation**, 2006 **Combinatorics of Curves on Hurwitz Surfaces** Roger Vogeler, 2004 **Sūgaku Expositions**, 2005 **Resenhas IME-USP**, 2003 **Applied Mathematics**, 2007 Metric and Comparison Geometry Jeff Cheeger, Karsten Grove, 2007 Science in the Twentieth Century, 1978 **Kant-Studien**, 2008 **Mathematics** Vladimir Igorevich Arnol'd, 2000 This volume is a celebration of the state of mathematics at the end of the millennium Produced under the auspices of the International Mathematical Union IMU the book was born as part of the activities of World Mathematical Year 2000 It consists of 28 articles written by influential mathematicians Authors of 14

contributions were recognized in various years by the IMU as recipients of the Fields Medal from K F Roth Fields Medalist 1958 to W T Gowers Fields Medalist 1998 **Science Progress in the Twentieth Century** ,1915 *Guide to Reprints* ,2009 **Turkish Journal of Physics** ,2000
