Finding the cause and applying the insights toward prevention and treatment forms the ultimate goal of most disease research. This strategy has been successfully used to make diseases like Scurvy and Smallpox, a history. The impact of this research during the last few years has been nothing less than miraculous. More and more people are living longer with healthy and productive lives, well into the 80's and 90's. Discovery of the cause(s) of disease(s) however is a demanding, time consuming, and expensive exercise. Also, there is no guarantee for success. Yet, even the modest success in search for causes have the potential to change the outcome and perception. Early diagnosis of a number of cancers for example is now viewed as treatable with reasonable chance of recovery. Also, some heart diseases are being managed and treated with high rate of success. Given this record of success, the research on disease causations continues to increase and the results have begun to pay increasing dividend. Unfortunately, there are cases of diseases where even full understanding of the cause has not resulted in the prevention or treatment of some common and devastating diseases. One such disease is the fetal alcohol spectrum disorder (FASD).

FASD is caused by the exposure of developing fetus to alcohol via maternal drinking during pregnancy (Jones and Smith, 1973). It represents the biggest single cause of mental retardation and developmental disabilities among babies born in the Western World (Barry et al., 2009). In the U.S. more than 50,000 babies are born with FASD every year (May and Gossage, 2001) and the annual cost of

treating FASD in Canada and U.S. exceeds \$6 and \$8 billions, respectively (Lupton et al., 2004; Popova et al., 2013). Although, the prevention of FASD is a high priority, the failure to prevent it is attributed to our alcohol culture. Most people drink for social and recreational purposes. Others are addicted to alcohol.

As it stands, there is no consensus on whether there is a "safe" limit for alcohol consumptions during pregnancy. Recent research involving animal (mice) models has shown that continuous exposure of low-to-moderate dose of alcohol during pregnancy impacts behavioral and cognitive outcomes of resulting pups (Kleiber et al., 2011) and even a single binge dose of alcohol at any time during pregnancy results in alterations in gene expression (Kleiber et al., 2012, 2013) and associated FASD related phenotypes. Furthermore, the molecular alterations may be initiated and maintained for life by alcohol's effect on epigenetic features that includes DNA methylation (Laufer et al., 2013). The results on animal models argue that clinical features of FASD represent "tip of the iceberg." They are also backed by results on humans. For example, exposure of human embryonic stem cells to low alcohol can alter gene expression leading to the abnormal development of prefrontal cortex (Krishnamoorthy et al., 2010). Also, fetal alcohol exposed school children show "a small but potentially important detrimental effect" on educational outcomes (Zuccolo et al., 2013) as well as generalized deficit of conceptualization (Quattlebaum and O'Connor, 2013).

We feel that such results deserve due consideration given that Royal College

of Obstetrics and Gynecologists (Royal College of Obstetrician and Gynaecology, 2006) states that, "there is no evidence of harm from low levels of alcohol consumption, defined as no more than one or two units of alcohol once or twice a week." Also, "there is considerable doubt as to whether infrequent and low level of alcohol consumption during pregnancy convey any long-term harm"—in other words they suggest a safe amount of alcohol consumption in pregnancy. Unfortunately, this limit has not been defined and may vary from individual to individual. Individual women process alcohol differently. Also, the age of the mother, the timing and regularity of the alcohol ingestion, and whether the mother has eaten any food while drinking may be important. We argue that there is no logistic evidence to define this limit. What is needed is to undertake thorough studies on neurodevelopment and assess the significance of such factors as maternal and fetal genotype, stress during pregnancy and childbirth, prenatal drinking patterns (mild, medium, heavy), post-natal environment, and socioeconomic status, as most of these may contribute to the manifestation of the effect of prenatal alcohol on the newborn. We note that some of these studies will be problematic if not impossible on humans. The rational question is "does no evidence of harm from low levels of alcohol consumption means 100% exclusion of the possibility of any harm to the fetus?" To the best of our understanding the answer is "no."

The issue is particularly problematic as there is a rise in heavy drinking by young people, particularly women. Often, it is

Right To Be Born Healthy:

Pilgrims in Medicine: Conscience, Legalism and Human Rights Thomas Faunce, 2005-02-01 This arrestingly novel work develops a normative synthesis of medical humanities virtue ethics medical ethics health law and human rights It presents an ambitious complex and coherent argument for the reconceptualisation of the doctor patient relationship and its regulation utilising approaches often thought of as being separate if not opposed virtue based ethics and universal human rights The case is argued gracefully with moderation but also with respect for opposing positions The book s analysis of the foundational professional virtue of therapeutic loyalty is an original departure from the traditional discourse of patient autonomy and the ethical and legal duties of the medical practitioner The central argument is not merely presented as bookends in the introduction and conclusion It is cogently represented in each chapter and section and measured against the material considered A remarkable feature is the use of aptly selected canonical literature to inform the argument These references run from Hesse s *The Glass Bead Game* in the abstract to Joyce s *Ulysses* in the conclusion They include excerpts from and discussion about Bergman Borges Boswell Tolstoy de Beauvoir Chekhov Dostoevsky Samuel Johnson Aristotle Orwell Osler Chaucer Schweitzer Shakespeare Thorwalds Kafka and William Carlos Williams Such references are used not merely as an artistic and decorative leitmotif but become a critical narrative element and another complex and rich layer to this work The breadth and quality of the references are testimony to the author s clear understanding of the modern law and literature movement This work provides the basis of a medical school course As many medical educators as possible should also be encouraged to read this work for the insights it will give them into using their own personal life narratives and those of their patients to inform their decision making process This thesis will also be of value to the judiciary whose members are often called upon to make normatively difficult judgments about medical care and medical rules The human rights material leads to a hopeful view of an international movement toward a universal synthesis between medical ethics and human rights in all doctor patient relationships

Today's Priorities in Mental Health S.H. Fine,R. Knell,T.Y. Lin,2012-12-06 Two themes seem to emerge repeatedly when reading through this volume One is consensus and the other is search There was a strong consensus during the Congress that children and families were the major and foremost concern of all present regardless of their geographic origin or professional background This concern was often expressed in terms of commitment to or as goal for the international mental health movement for the years to come The second theme search represents an effort to translate this concern into activities search for concrete immediate goals for ways and means of translating into actual programs and projects for interested people to carry on the work and better ways to train them to do the work well for ways to obtain support and lastly search for ways of coordinating efforts of people in different parts of the world All these and other matters are taken up in the discussions in this volume The complexity of problems encountered in a rapidly changing world and the diversity of resources available in different parts of the world make the task of searching difficult and sometimes confusing In spite of the earnest efforts made the results may be inconclusive and some of those proposed can be regarded only as hypotheses or ideas for experimentation Pregnancy Affirmations Nina Dixon,2021-10-29 In Nina s new book she aims to maintain her

authentic approach by empowering women on their journey into motherhood With 40 weeks of inspiring words 40 weeks to empower women through their pregnancies Nina shares these affirmations and declarations with women so that they can become who they want to be Pregnancy Affirmations 40 Weeks of Fortitude offer words to boost your self esteem and help to develop the confidence needed on the days that seem challenging Whether you are with a support system of people around you your loved ones at home alone or in the workplace this book will help you deal with the changes your body mind and spirit will endure It will also strengthen your ability to triumph in becoming a phenomenal mother Science for the People ,1984 **The Phrenological Journal and Science of Health** ,1888 Human Reproduction, Emerging Technologies, and Conflicting Rights Robert Blank,Janna C.
