Risk The Policy Implications Of Risk Compensation And Plural Rationalities:

Managing Risk in Projects David Hillson, 2017-05-15 Projects are risky undertakings and modern approaches to managing projects recognise the central need to manage the risk as an integral part of the project management discipline. Managing Risk in Projects places risk management in its proper context in the world of project management and beyond and emphasises the central concepts that are essential in order to understand why and how risk management should be implemented on all projects of all types and sizes in all industries and in all countries. The generic approach detailed by David Hillson is consistent with current international best practice and guidelines including A Guide to the Project Management Body of Knowledge PMBoK and the Project Risk Management Practice Standard from PMI, the APM Body of Knowledge and Project Risk Analysis Management PRAM Guide from APM, Management of Risk Guidance for Practitioners from OGC and the forthcoming risk standard from ISO but David also introduces key developments in the risk management field ensuring readers are aware of recent thinking focusing on their relevance to practical application. Throughout the goal is to offer a concise description of current best practice in project risk management whilst introducing the latest relevant developments to enable project managers, project sponsors and others responsible for managing risk in projects to do just that effectively.

An Analysis of Regulatory Frameworks for Wireless Communications, Societal Concerns and Risk Haim Mazar, 2009 This thesis analyses how and why culture and geography influence the allocation and licensing of the radio frequency RF spectrum in different nations. Based on a broad comparative study of 235 countries, an interdisciplinary approach is used to explore regulatory frameworks and attitudes toward risk. In addition, detailed case studies of the UK, France, the US and Ecuador provide deeper insights into the main contrasting regulatory styles. Three alternative sociological theories are used to analyse and explain the results for both the in-depth and broad brush studies. The Cultural Theory of Mary Douglas and co-workers is first used to categorise countries in terms of perceptual filters. The empirical findings indicate some countries to be apparently exceptional in their behaviour. The theory of Bounded Rationality is used to investigate and explain these apparent irrationalities. Finally, Rational Field Theory shows how beliefs and values guide administrations in their RF regulation. A number of key factors are found to dominate and patterns emerge. The European RF harmonisation is unique. Following European unification, wireless regulation is divided into two major camps: the EU and the US, which differ in their risk concerns, approach to top-down mandated standards, allocation of RF spectrum to licence-exempt bands and type approval process. The adoption of 3G cellular UMTS versus CDMA2000 and digital TV standards DVB-T, ATSC, ISDB-T around the world reflects geopolitical and colonial influence. The language of a country is a significant indicator of its analogue TV standard: SECAM, PAL, NTSC. Interestingly, the longitude of a country to a fair extent defines RF allocation. Africa and West Asia follow Europe, whereas the Americas approximate the US RF regulation. Risk tolerability differs between tropical and non-tropical climates. The collectivised, centralised versus the individualised, market-based rationalities result in different

regulatory frameworks and contrasting societal and risk concerns The success of the top down European GSM and the bottom up Wi Fi standards reveal how the central planning and market based approaches have thrived Attitudes to RF human hazards and spurious emissions levels reveal that the US Canada and Japan are more tolerant of these radiation risks than Europe Australia Canada New Zealand UK and USA encourage technological innovation A practical benefit of this study is that it will give regulators more freedom to choose a rational RF licensing protocol by better understanding the possibly self imposed boundaries of cultural and geographical factors which are currently shaping allocation Academically there is utility in undertaking a cultural and geographic analysis of a topic that is mostly the domain of engineering economic and legal analysts
