*Environmental Management Tool Kit for Obsolete Pesticides - Volume 5* Food and Agriculture Organization of the United Nations, 2020-01-23 Within the remit of reducing world hunger FAO has been extensively involved with pests and pesticides management Based on the experience gained over the past 20 years FAO has developed a series of tools which allow a risk based approach to dealing with obsolete pesticide stocks considering the potential impact on both public health and the wider environment This has led to the development and publication of the Environmental Management Tool Kit Series The methodologies presented in these

tools have been developed to provide a sound technical baseline for implementation of pesticide inventory obsolete stock site prioritization and safeguarding projects in developing and developed countries in many regions across the globe. They have a solid foundation in international regulations from the US and Europe and so can be considered as complying with international best practice for worker and environmental safety. Despite the implementation of projects resulting in the removal of the above ground stocks, pesticide legacy problems persist that affect the ground beneath the sites and the groundwater passing through it. In many cases the grounds at these sites present a greater risk to human health and the wider environment than the original pesticide stockpiles which are often sent for environmentally sound disposal. To assess the particular risks posed by pesticide contaminated land, FAO has developed a fifth tool in the EMTK series, the EMTK 5. The conclusions drawn from using EMTK5 enable the development of a national contaminated land risk management plan and site level risk reduction strategies which

**Contaminated Land** Mary R. Harris, Sue Herbert, 1994. This guide addresses the topics of investigation, assessment and remediation of contamination in the context of current thinking on how best to deal with the issues surrounding contaminated land, both in terms of redevelopment and from considerations of human health and environmental impacts.

*Assessment and Reclamation of Contaminated Land* R. M. Harrison, R. E. Hester, 2007-10-31. Contaminated land and the methods and legal controls governing its reclamation for subsequent development and use are of great current interest and concern. This volume covers aspects of this subject ranging from the origins and extent of contaminated land problems, including effects on human health, through investigative measures to specific techniques of remediation. It is written in the context of the new UK contaminated land regime and includes human and ecological risk assessment methodology and the legal liabilities and insurance aspects of contaminated land. This authoritative review will be welcomed by those involved in the areas of land use planning and development, consultants and engineers in contaminated site investigation and remediation, and environmental regulators. Students of land management and environmental science will also find it essential reading.

**Sustainable Brownfield Regeneration** Timothy J. Dixon, 2007-10-22. Sustainable Brownfield Regeneration presents a comprehensive account of UK policies, processes and practices in brownfield regeneration and takes an integrated and theoretically grounded approach to highlight best practice. The book has two principal aims. The first is to examine the ways in which science and social science research disciplines can be brought together to help solve important brownfield regeneration issues, with a focus on the UK. The second is to assess the efficiency and effectiveness of different types of regeneration policy and practice and to show how liveable spaces can be produced from problem places.

Jacket *Reclamation of Contaminated Land* C. Paul Nathanail, R. Paul Bardos, 2005-09-27. Land contamination is of global concern, with many of the world's industries potentially harming the environment and human health. Along with rapidly changing policy and technological developments, this is an interdisciplinary area in which successful contaminated land management depends on the expertise of and interaction between a number of scientific and

engineering disciplines Reclamation of Contaminated Land takes into account the different groups involved in contaminated land management and offers a flexible learning approach based on practical experience and research It presents an overview of the general skills and knowledge required encompassing both general management and regulatory practice and specific land contamination issues Divided into two parts Part I discusses site characterisation and the design of site investigations and the central role of conceptual models and risk assessment in decision making Part II discusses how risks from contaminated land are managed and the role of different remediation approaches to achieving this This book is of great value for 2nd 3rd 4th year undergraduates and MSc students in Environmental Science Environmental Technology Environmental Management Geography Geology Estate and Land Management It is also key reading for undergraduates and MSc students in Chemical Engineering Civil Environmental Engineering and Environmental Chemistry as well as professional planners and developers and local authorities
