Methods Toward a Science of Behavior and Experience William J. Ray, Richard Ravizza, 1988

The Transition to

Smart Mobility Leander Kauschke, 2023-10-19 Most contemporary notions of the fairly recent concept smart mobility portray an imminent transition of similar socio economic consequences as the shift from horses to automobiles did 100 years ago Present book thus offers an in depth look at the variables involved in the equation of smart mobility acceptance 1 and envisaged institutional change 2 Both views are embedded in the Multi Level Perspective Study 1 develops a structural equation model in SmartPLS Use cases cover eBikes N 537 mobility as a service N 531 and fully automated vehicles N 558 Based on the results acceptance relies on five factors performance expectancy facilitating conditions social influence habit and hedonic motivation Study 2 applies the Institutional Role Model IRM to better understand system dynamics Thus the smart mobility ecosystem is mapped in a structured manner It identifies nine institutions as well as four technical and four economic roles Results of interviews with experts N 8 support the IRM s significance as a vision provider for a new mobility regime In the end these two perspectives amalgamate This opens a sophisticated space for public debate about the commencing transition to smart mobility
