Methods and Applications of Computer Raytracing Stanford University. Stanford Electronics Laboratories, 1969 For about five years considerable effort was devoted at this laboratory to the exploitation of the digital computer as a means for simulating ionospheric radio propagation and associated signal processing Stress was placed on simulation of oblique propagation at HF by the most practical means engineering the programs to achieve economical operation The computer

processes consist mainly of ionospheric structural analysis and coding raytracing and the subsequent use of ray trajectory data to simulate the operation of complete ionospheric radio systems The report summarizes the conclusions which have been drawn from the work including much technical data some programming details and hopefully some insight into the optimum methods for doing this work Also there is a considerable amount of information inherently contained in these data which bear on the understanding of the propagation simulated Many applications of raytracing are discussed and many useful programming or plotting techniques are described some for the first time Finally a number of plotted examples are given to show what can be achieved by these methods and to illustrate selected aspects of ionospheric propagation Author

Gradient Index Optics Erich Merchand, 2012-12-02 Gradient Index Optics deals with the application of gradients in optical systems of classical types gradient index lenses The emphasis is on the theory and practice related to gradient index lenses Only isotropic media are considered since they are the ones for which the refractive index at each point is independent of direction Comprised of 12 chapters this book begins with a historical background on the use of gradients in astronomy and developments in gradient index lenses along with the underlying basic theory The discussion then turns to spherical gradients paying particular attention to rays Maxwell's fisheye lens the Luneburg lens and astronomical refraction Subsequent chapters focus on the ray trace in a spherical gradient axial gradients and their use as an anti reflection coating radial gradients and ray tracing in a radial gradient and fundamentals of aberration theory The wood lens and ray trace in a general medium are also considered together with methods for fabrication of gradient elements and measurement of index gradients using an approximate method and interferometric methods This monograph will be of interest to physicists
