Good Ethics and Bad Choices Jennifer S. Blumenthal-Barby, 2021-08-03 An analysis of how findings in behavioral economics challenge fundamental assumptions of medical ethics integrating the latest research in both fields Bioethicists have long argued for rational persuasion to help patients with medical decisions But the findings of behavioral economics popularized in Thaler and Sunstein's Nudge and other books show that arguments depending on rational thinking are unlikely to be successful and even that the idea of purely rational persuasion may be a fiction In Good Ethics and Bad Choices Jennifer Blumenthal-Barby examines how behavioral economics challenges some of the most fundamental tenets of medical ethics She not only integrates the latest research from both fields but also provides examples of how physicians apply concepts of behavioral economics in practice Blumenthal-Barby analyzes ethical issues raised by nudging patient decision making and argues that the practice can improve patient decisions prevent harm and perhaps enhance autonomy She then offers a more detailed ethical analysis of further questions that arise including whether nudging amounts to manipulation to what extent and at what point these techniques should be used when and how their use would be wrong and whether transparency about their use is required She provides a snapshot of nudging in the weeds reporting on practices she observed in clinical settings including psychiatry pediatric critical care and oncology Warning that there is no single simple account of the ethics of nudging Blumenthal-Barby offers a qualified defense arguing that a nudge can be justified in part by the extent to which it makes patients better off

May We Make the World? Laurie Zoloth, 2023-12-19 An in-depth look at genetic alteration in the natural world and the oppositions to it seen through the case study of a gene drive for malaria May We Make the World is an engaging reflection on the history nature goal and meaning of using a new technological idea CRISPR based genetic engineering to alter the genome of the mosquito that carries malaria This technology called a gene drive can alter the sex ratio in *Anopheles gambiae* mosquitoes the key vector for *falciparum* the deadliest form of malaria *P. falciparum* kills 400,000 people a year largely the poorest children in the world among them In

her sobering examination of the issue Laurie Zoloth considers the leading ethical arguments for and against gene drives explores the regulatory efforts that have emerged long in advance of the science and considers the philosophical questions raised by the struggle to eliminate malaria The development of a gene drive for malaria will have far reaching implications for it represents the first use of genetic engineering in the natural world and the first creation of a genetic variant intended to spread in the African wild beyond human control Drawing on two decades of work Zoloth brilliantly argues that we can understand the complex moral issues at stake only by carefully reflecting on the science the nature of the local and global discourse about genetic engineering and the long history of malaria which as it transformed from a worldwide disease to a tropical one reshaped the world as we know it **Encyclopedia of Bioethics** Stephen Garrard Post,2003 *Choosing Down Syndrome* Chris Kaposy,2018-04-06 An argument that more people should have children with Down syndrome written from a pro choice disability positive perspective The rate at which parents choose to terminate a pregnancy when prenatal tests indicate that the fetus has Down syndrome is between 60 and 90 percent In *Choosing Down Syndrome* Chris Kaposy offers a carefully reasoned ethical argument in favor of choosing to have such a child Arguing from a pro choice disability positive perspective Kaposy makes the case that there is a common social bias against cognitive disability that influences decisions about prenatal testing and terminating pregnancies and that more people should resist this bias by having children with Down syndrome Drawing on accounts by parents of children with Down syndrome and arguing for their objectivity Kaposy finds that these parents see themselves and their families as having benefitted from having a child with Down syndrome To counter those who might characterize these accounts as based on self deception or expressing adaptive preference Kaposy cites supporting evidence including divorce rates and observational studies showing that families including children with Down syndrome typically function well Himself the father of a child with Down syndrome Kaposy argues that cognitive disability associated with Down syndrome does not lead to diminished well being He argues further that parental expectations are influenced by neoliberal ideologies that unduly focus on the supposed diminished economic potential of a person with Down syndrome Kaposy does not advocate restricting access to abortion or prenatal testing for Down syndrome and he does not argue that it is ethically mandatory in all cases to give birth to a child with Down syndrome People should be free to make important decisions based on their values Kaposy s argument shows that it may be consistent with their values to welcome a child with Down syndrome into the family *Contemporary Issues in Bioethics* Tom L. Beauchamp,2003 This anthology represents all of the most important points of view on the most pressing topics in bioethics Containing current essays and actual medical and legal cases written by outstanding scholars from around the globe this book provides readers with diverse range of standpoints including those of medical researchers and practitioners legal experts and philosophers **Feminist Bioethics** Jackie Leach Scully,Laurel E. Baldwin-Ragaven,Petya Fitzpatrick,2010-03-15 The essays collected here explore the relation of feminist bioethics to mainstream bioethical thought and practice From publisher

,2003 **Patient Autonomy and the Ethics of Responsibility** Alfred I. Tauber,2005 The principle of patient autonomy dominates the contemporary debate over medical ethics In this examination of the doctor patient relationship physician and philosopher Alfred Tauber argues that the idea of patient autonomy which was inspired by other rights based movements of the 1960s was an extrapolation from political and social philosophy that fails to ground medicine s moral philosophy He proposes instead a reconfiguration of personal autonomy and a renewed commitment to an ethics of care In this formulation physician beneficence and responsibility become powerful means for supporting the autonomy and dignity of patients Beneficence Tauber argues should not be confused with the medical paternalism that fueled the patient rights movement Rather beneficence and responsibility are moral principles that not only are compatible with patient autonomy but strengthen it Coordinating the rights of patients with the responsibilities of their caregivers will result in a more humane and robust medicine Tauber examines the historical and philosophical competition between facts scientific objectivity and values patient care in medicine He analyzes the shifting conceptions of personhood underlying the doctor patient relationship offers a topology of autonomy from Locke and Kant to Hume and Mill and explores both philosophical and practical strategies for reconfiguring trust and autonomy Framing the practicalities of the clinical encounter with moral reflections Tauber calls for an ethical medicine in which facts and values are integrated and humane values are deliberately included in the program of care Bioethics E. bioethics *Journal of the American Medical Association* ,2004 **Current Controversies in the Biological Sciences**

Karen Faye Greif,Jon Frederick Merz,2007 In recent years advances in biological science and technology have outpaced policymakers attempts to deal with them Current Controversies in the Biological Sciencesexamines the ways in which the federal government uses scientific information in reaching policy decisions providing case studies of the interactions between science and government on different biomedical biological and environmental issues These case studies document a broad range of complex issues in science policy from the Human Genome Project to tobacco regulation and provide an accessible overview of both the science behind the issues and the policy making process The cases illustrate the different ways in which science and politics intersect in policy decisions as well as the different forms policy itself may take including not only regulatory action but the lack of regulation Among the topics examined are public and private research funding as seen in

gene patenting reluctance to regulate even when a product has been proven unhealthy as in the case of tobacco a comparison of U S and international policy responses to genetically modified organisms and the competing interests at play in air pollution policy Each chapter includes shorter side essays on related topics for example essays on issues raised by the SARS epidemic accompany the detailed case study of the public health response to the anthrax laced mail received in the weeks after 9 11 This clear and readable introduction to controversial issues in the biological sciences will be a valuable resource for students of science policy and bioethics and for professionals in industry government and nongovernmental organizations who need background on emerging issues in the biological sciences

Descriptive content provided by Syndetics a Bowker service Summary *Design and Destiny* Jewish and Christian Perspectives on Human Germline Modification by Cole Turner Ronald Editor Terms of use We are approaching the day when advances in biotechnology will allow parents to design a baby with the traits they want The continuing debate over the possibilities of genetic engineering has been spirited but so far largely confined to the realms of bioethics and public policy *Design and Destiny* approaches the question in religious terms discussing human germline modification the genetic modification of the embryonic cells that become the eggs or sperm of a developing organism from the viewpoints of traditional Christian and Jewish teaching The contributors leading religious scholars and writers call our attention not to technology but to humanity reflecting upon the meaning and destiny of human life in a technological age Many of these scholars argue that religious teaching can support human germline modification implemented for therapeutic reasons although they offer certain moral conditions that must be met The essays offer a surprising variety of opinions including a discussion of Judaism s traditional presumption in favor of medicine an argument that Catholic doctrine could accept germline modification if it is therapeutic for the embryo an argument implying that traditional Christian teaching permits germline modification whether for therapy or enhancement and a classical Protestant view that germline modification should be categorically opposed Contributors Lisa Sowle Cahill Nigel M de S Cameron Ronald Cole Turner Amy
