Stem Kits Best:

Online Science Learning: Best Practices and Technologies Downing, Kevin, Holtz, Jennifer, 2008-05-31 The continued growth in general studies and liberal arts and science programs online has led to a rise in the number of students whose science learning experiences are web based. However, little is known about what is actually going on in web based science courses at the level of the disciplines within liberal arts and sciences or the corresponding course design features. Online Science Learning: Best Practices and Technologies reviews trends and efforts in web based science instruction and evaluates contemporary philosophies and pedagogies of online science instruction. This title on an emergent and vital area of education clearly demonstrates how to enrich the academic character and quality of web based science instruction. *100 Top Picks for Homeschool Curriculum* Cathy Duffy, 2005 A critical volume for the homeschooling community that helps parents make informed choices regarding learning styles and curriculum.

Computer Science and Engineering Education for Pre-collegiate Students and Teachers Andrea Burrows, 2019-06-11 Now more than ever as a worldwide STEM community, we need to know what pre-collegiate teachers and students explore, learn and implement in relation to computer science and engineering education. As computer science and engineering education are not always stand-alone courses in pre-collegiate schools, how are pre-collegiate teachers and students learning about these topics? How can these subjects be integrated? Explore six articles in this book that directly relate to the currently hot topics of computer science and engineering education as they tie into pre-collegiate science, technology and mathematics realms. There is a systematic review article to set the stage of the problem. Following this overview are two teacher-focused articles on professional development in computer science and entrepreneurship/venture training. The final three articles focus on varying levels of student work including pre-collegiate secondary students' exploration of engineering design, technology, future science teachers' collegiate students' perceptions of engineering and pre-collegiate future engineers' exploration of environmental radioactivity. All six articles speak to computer science and engineering education in pre-collegiate forums but blend into the collegiate world for a look at what all audiences can bring to the conversation about these topics.
