Practical Performance Modeling Khalid Begain,Gunter Bolch,Helmut Herold,2001-01-31 Practical Performance Modeling Application of the MOSEL Language provides an easy to understand but nevertheless complete introduction to system modeling using MOSEL and illustrates how easily MOSEL can be used for modeling real life examples from the fields of computer communication and manufacturing systems **Introduction to Computational Optimization Models for Production Planning in a Supply Chain** Stefan Voß,David L. Woodruff,2013-06-05 The book begins with an easy to read introduction to the concepts associated with the creation of optimization models for production planning These concepts are then applied to well known planning models namely mrp and MRP II From this foundation fairly sophisticated models for supply chain management are developed Another unique feature is that models are developed with an eye toward implementation In fact there is a chapter that provides explicit examples of implementation of the basic models using a variety of popular commercially available modeling languages **Information Technologies and Mathematical Modelling. Queueing Theory and Applications** Alexander Dudin,Anatoly Nazarov,Alexander Moiseev,2018-08-27 This book constitutes the proceedings of the 17th International Conference on Information Technologies and Mathematical Modelling ITMM 2018 named after A F Terpugov and the 12th Workshop on Retrial Queues and Related Topics held in Tomsk Russia in September 2018 The 30 papers presented in this volume were carefully reviewed and selected from 84 submissions The conference covers various aspects of information technologies focusing on queueing theory stochastic processes Markov processes renewal theory network performance equation and network protocols **Applied System Simulation** Mohammad S. Obaidat,Georgios I. Papadimitriou,2012-12-06 Simulation and molding are efficient techniques that can aid the city and regional planners and engineers in optimizing the operation of urban systems such as traffic light control highway toll automation consensus building public safety and environmental protection When modeling transportation systems such as freeway systems arterial or downtown grid systems the city planner and engineer is concerned with capturing the varied interactions between drivers automobiles and the infrastructure Modeling and simulation are used to effectively optimize the design and operation of all of these urban systems It is possible that in an urban simulation community workshop citizens can work interactively in front of computers and be able using the click of the mouse to walk up to their own front porch looking at the proposed shopping mall alternatives across the street from virtually any angle and proposed bridge or tunnel and see how it can reduce traffic congestion Buildings can be scaled down or taken out their orientation can be changed in order to check the view and orientation in order to have better site with efficient energy conservation The stone or brick material on a building can be replaced by colored concrete or more trees and lampposts can be placed on the site Such flexibility in simulation and animation allows creative ideas in the design and orientation of urban sites to be demonstrated to citizens and decision makers before final realization *Distributed*
