Science Experiments Tricks Promo:

Performing Illusions Dan R. North, 2008 The camera supposedly never lies yet film's ability to frame cut and reconstruct all that passed before its lens made cinema the pre eminent medium of visual illusion and revelation from the early twentieth century onwards This volume examines film's creative history of special effects and trickery encompassing everything from George M li's first trick films to the modern CGI era Evaluating movements towards the use of computer generated synthesespians in films such as Final Fantasy the Spirits Within 2001 this title suggests that cinematic effects should be understood not as attempts to perfectly mimic real life but as constructions of substitute realities situating them in the cultural lineage of the stage performers and illusionists and of the nineteenth century With analyses of films such as Destination Moon 1950 Spider Man 2002 and the King Kong films 1933 and 2006 this new volume provides an insight into cinema's capacity to perform illusions
