Ficklin, 1995-07 Explains geologic and geochemical approaches to the prediction of mine drainage composition discusses the chemical reactions and factors that control pH and metal concentrations in mine drainage systems Describes several processes and interactions that influence metal mobility and transport in natural systems Presents case studies that illustrate geologic controls on the composition of mine drainage systems Outlines a predictive approach for the weathering behavior of diverse mineral deposit types based on the behavior of mineralogic zones Charts U.S. Geological Survey Open-file Report, 1994

**Progress on Geoenvironmental Models for Selected Mineral Deposits Types**, 2002 Environmental Code of Practice for Metal Mines Canada. Environment Canada, 2009 Describes operational activities and associated environmental concerns of this industrial sector The document applies to the complete life cycle of mining from exploration to mine closure and environmental management practices are recommended to mitigate the identified environmental concerns The recommended practices in the Code include the development and implementation of environmental management tools the management of wastewater and mining wastes and the prevention and control of environmental releases to air water and land The Code of Practice will be adopted by Environment Canada and others as a guidance document that recommends environmental protection practices for the mine life cycle The Code applies specifically to metal mines but will provide useful guidance for all sectors of the mining industry
