Abstract

In a German multicenter treatment study, 354 patients with schizophrenia and schizoaffective disorder were followed for 2 years. The data collected were taken as a basis for the present predictor study. For the first time, the technique of classification and regression tree (CART) analysis has been employed for this purpose. CART yielded informative data and appeared to be a useful instrument in predictor research. On the outcome variables "relapse" and "rehospitalization," significant predictor variables were found in several areas: neuroleptic treatment, onset and previous course (precipitating factors, first manifestation, hospitalization in the preceding year, suicide attempts), psychopathology (residual type, schizoaffective disorder), social adjustment (marital status, employment, intensity of life, Phillips score), previous life experiences (traumatic experiences and psychiatric or developmental disturbances in childhood), and biology (gender, age). Our investigation confirmed the generally prevalent views regarding the value of neuroleptic treatment, the multifactorial etiology, and the vulnerability stress model of schizophrenia.

Key words: Predictors, relapse, rehospitalization. *Schizophrenia Bulletin*, 24(1):87-98, 1998.

The diagnosis "dementia praecox," a term coined at the beginning of this century by Kraepelin (1903) to stand for a group of profound mental disturbances that are known today as schizophrenia, was inescapably associated with a prognosis characterized by progressive deterioration. Since we now know that the course of schizophrenia is not that disastrous, with nearly 30 percent of the patients recovering completely or having a remission and another third suffering from only minor residual symptoms (Ciampi 1988), a large number of investigations have been made in an attempt to predict the outcome of the disease.

Predictors were found in the following areas: onset and previous course (Vaillant 1964; Möller et al. 1982; Biehl et al. 1986; Buchkremer et al. 1991; Carpenter and Strauss 1991; Jonsson and Nyman 1991; Mortensen and Eaton 1994), psychopathology (Vaillant 1964; Möller and von Zerssen 1985; Biehl et al. 1986; Carpenter and Strauss 1991; Jonsson and Nyman 1991; Geddes et al. 1994; Mortensen and Eaton 1994), social adjustment (Möller et al. 1982; Biehl et al. 1986; Gaebel and Pietzcker 1987a; Buchkremer et al. 1991; Carpenter and Strauss 1991; Jonsson and Nyman 1991; Scottish Schizophrenia Research Group 1992; Beiser et al. 1994; Geddes et al. 1994), premorbid personality (Vaillant 1964; Gidycz-Klein and Klein 1969; Möller and von Zerssen 1985; Jonsson and Nyman 1991), emotional atmosphere in the family (Bebbington and Kuipers 1994), and biological (genetic) factors (Möller et al. 1982; Angermeyer et al. 1989; Jonsson and Nyman 1991; Scottish Schizophrenia Research Group 1992; Beiser et al. 1994; Geddes et al. 1994; Mortensen and Eaton 1994) (table 1). Additionally several predictor scales that explained up to 88 percent of the outcome variance were constructed (e.g., Möller et al. 1982; Buchkremer et al. 1991).

Between 1983 and 1989 a prospective German multicenter study on neuroleptic treatment was conducted. For 2 years 364 schizophrenia patients were followed to compare the efficacy of neuroleptic maintenance treatment with that of early intervention and of crisis intervention treatment with neuroleptics (Pietzcker et al. 1986, 1993). This study showed that maintenance treatment was significantly superior to the other two therapy strategies. Within the study framework, psychosocial data were collected, which, in view of the large sample size, were used for further investigation. After considering the results of previ-

Predictors Of Relapse In Schizophrenia:

Predictors of Relapse in Schizophrenia Jeffrey A. Lieberman, John M. Kane, 1986 *Adherence to Antipsychotics in Schizophrenia* Emilio Sacchetti, Antonio Vita, Alberto Siracusano, Wolfgang Fleischhacker, 2013-11-27 Poor adherence to therapy is one of the main obstacles to treatment effectiveness in schizophrenia. It is the main determinant of relapse, hospitalization, symptom persistence, and poor psychosocial functioning and outcome. Adherence to treatment is affected by various factors related to the disease characteristics, to the patient, him or herself, to the treatment, and to the therapeutic relationship. Some of these factors are modifiable, and both pharmacological and non-pharmacological strategies have been developed for this purpose. This book addresses the different aspects of adherence to treatment in schizophrenia and related disorders in a systematic but easy-to-use manual format. Chapters focus on a full range of issues, including pharmacological and non-pharmacological strategies to enhance adherence and continuity of care, relevant psychological factors, the importance of the patient-doctor relationship, and the need for an alliance with other care givers. *Adherence to Antipsychotics in Schizophrenia* will be an invaluable asset for all who are involved in the care of patients with schizophrenia.

Guidelines for Neuroleptic Relapse Prevention in Schizophrenia Werner Kissling, 2012-12-06 How neuroleptics are used in relapse prevention is a very controversial topic. Fifty percent of all schizophrenic patients do not receive sufficient prophylactic treatment and suffer from frequent relapses. To help correct this situation, leading international experts in the field of neuroleptic relapse prevention have agreed upon guidelines after intensive discussions at a consensus workshop in Bruges in April 1989. Precise guidelines to the most important questions on n.r.p. are formulated, especially concerning indications, treatment duration, and dosage. The current state of the literature on these questions is presented in comprehensive reviews. For the practicing psychiatrist or general practitioner, exact guidelines for prophylactic treatment are presented for patients and their families. Eager to obtain more information, the scientific basis of the treatment is explained.
