Hypertension in Pregnancy Alexander Heazell, Errol R. Norwitz, Louise C. Kenny, Philip N. Baker, 2010-08-26 Hypertensive disorders are among the most common medical complications of pregnancy with an incidence of approximately 6-10%. This spectrum of conditions includes essential hypertension, pre-eclampsia and HELLP syndrome. For patients with pre-existing hypertension, management ideally commences prior to conception and continues through pregnancy to the postnatal period. This book provides information on the evidence-based management of women with hypertension throughout pregnancy, supported by important background information on the etiology, risk factors and pathophysiology of these disorders. Illustrated with accompanying algorithms, tables and lists for quick reference on diagnostic criteria, drugs and side effects, this book will help clinicians rapidly gain access to the information they need to care for these patients. This will be of interest to all grades of obstetric trainees as well as specialists, obstetric anesthetists and anesthetic trainees, midwives and maternal-fetal physicians.

outcomes are threatened due to pregnancy induced hypertension which complicates nearly 6% 10% of pregnancies worldwide This disease carries a high risk of maternal and fetal morbidity and mortality Medications are commonly used to reduce blood pressure and physical consequences related to high blood pressure However the use of medications does not resolve the disease as there is no pharmacological cure Current evidence demonstrates the detrimental long term effects of pregnancy induced hypertension and the increased risk of future cardiac disease Close surveillance and effective treatment during pregnancy is needed to prevent serious complications The aim of this integrative review is to analyze the relationship between non pharmacologic interventions and the evidence that supports their use in the treatment of pregnancy induced hypertension Recommendations for patient education and monitoring during pregnancy were devised as a result of this review An analysis of the literature found an inverse relationship between non pharmacologic interventions and pregnancy induced hypertension The review lays the foundation for the acknowledgment and integration of the identified common themes to better inform research support a comprehensive understanding and produce suggestions for practice to decrease the prevalence of pregnancy induced hypertension Management of Chronic Hypertension During Pregnancy Cynthia Diane Mulrow, Elaine Chiquette, Robert Louis Ferrer, 2000-08 *Hypertension in Pregnancy* Dag Wide-Svensson, 1994
