Prehistoric Sharks And Modern Day Sharks:

Sharks Lived with the Dinosaurs! Jill Keppeler, 2016-12-15 Sharks are among Earth's oldest creatures. They appeared at least 420 million years ago, that's 200 million years before the first dinosaurs. These organisms were quite different than the ferocious marine predators we know today. Readers will love learning about these aquatic animals and how scientists think they survived against vicious marine reptiles such as pliosaurus. This book's lively design along with its high interest topic makes it a must read for shark and dinosaur lovers. Discovering Sharks Donna Parham, 2016-05-10 With a unique book cover that looks and feels like actual shark skin, DISCOVERING SHARKS is the ultimate guide to the fiercest most fascinating predators that lurk the ocean deep. This action-packed full color book features dozens of different types of sharks with captivating photographs and illustrations throughout. From the Great White to the Hammerhead, learn about those razor sharp teeth and prominent fins, mysterious behavior patterns, and even their unique diets. DISCOVERING SHARKS is jam-packed with gripping facts and fun tidbits as well as breath-taking images that nearly jump off the page and right into your lap. Featuring a one-of-a-kind textured book cover that feels like shark skin, this book is a must-have for any child fascinated by the fiercest creatures who lurk the ocean deep. **Sharks** Jenni Zellner, 2020-08-25 Plunge into the breath-taking world of sharks with this beautiful photographic pictorial. Sharks documents different types of sharks, their life cycle, biology, social habits, conservation, and fun facts about these powerful fish. Our seas and oceans are home to one of the fiercest hunters of the water. With over 400 species of sharks, from stingrays to the great white to the tiger shark to the dwarf lantern, it is no wonder that these ferocious creatures have captured our imaginations. Predators of the deep, their ancient biology has kept them at the top of the oceanic food chain. Did you know that sharks like having their noses pet? Despite the mouthful of teeth, they are precious and adorable water puppies. They are ancient animals like water dinosaurs who have been around for millions of years. They don't have bones. Learn more fun biological points about sharks and interesting facts about their environment with *Sharks*, the ideal gift for anyone who loves these fascinating animals and wants to be engulfed inside their world. Sharks and People Thomas P. Peschak, 2014-02-27 At once feared and revered, sharks have captivated people since our earliest human encounters. Children and adults alike stand awed before aquarium shark tanks, fascinated by the giant teeth and unnerving eyes. And no swim in the ocean is undertaken without a slight shiver of anxiety about the very real and very cinematic dangers of shark bites. But our interactions with sharks are not entirely one-sided. The threats we pose to sharks through fisheries, organized hunts, and gill nets on coastlines are more deadly and far-reaching than any bite. In *Sharks and People*, acclaimed wildlife photographer Thomas Peschak presents stunning photographs that capture the relationship between people and sharks around the globe. A contributing photographer to National Geographic, Peschak is best known for his unusual photographs of sharks; his iconic image of a great white shark following a researcher in a small yellow kayak is one of the most recognizable shark photographs in the world. The other images gathered here are no less riveting, bringing us

as close as possible to sharks in the wild. Alongside the photographs *Sharks and People* tells the compelling story of the natural history of sharks. Sharks have roamed the oceans for more than four hundred million years and in this time they have never stopped adapting to the ever-changing world. Their unique cartilage skeletons and array of super senses mark them as one of the most evolved groups of animals. Scientists have recently discovered that sharks play an important role in balancing the ocean, including maintaining the health of coral reefs. Yet tens of millions of sharks are killed every year just to fill the demand for shark fin soup alone. Today more than sixty species of sharks, including hammerhead, mako, and oceanic white tip sharks, are listed as vulnerable or in danger of extinction. The need to understand the significant part sharks play in the oceanic ecosystem has never been so urgent, and Peschak's photographs bear witness to the thrilling strength and unique attraction of sharks. They are certain to enthrall and inspire.

Great White Shark Ruth Owen, 1900-01-01 Great white sharks have been cruising the world's oceans for over 400 million years. With up to 3,000 teeth, a mouth that can open up to 4 feet wide and weighing up to 5,000 pounds, it's no wonder this shark rests at the top of the ocean's food chain. Engaging facts and chilling photography teach readers what makes this shark so great.

Megalodon and Other Prehistoric Sharks Tammy Gagne, 2021-08 Great white, bull, and tiger sharks are some of today's most talked-about sharks. But have you met the sharks of yesterday? Each prehistoric shark had its own amazing and sometimes strange features. The scissor-tooth shark had teeth in a spiral shape. The giant megalodon was about three times the size of a great white. One small prehistoric shark had a big dorsal fin in the shape of an ironing board. Readers will gobble up all the facts about these early ocean hunters and learn how they compare to modern sharks.

Sharks Past and Present Marianne Johnston, 1999-12-15 Discusses the prehistoric ancestors' evolution and some modern species of sharks.
