*Secretory Immunity and Infection* J. R. McGhee, 2012-12-06 The present conference is the third in a series on this topic sponsored by the NCP Drs McGhee, Istecky, Genco and Bowen are to be commended for arranging this truly comprehensive program We are fortunate that they have been able to assemble such a wealth of expertise Program staff considers the advice of scientists such as yourselves essential to the success of its mission Your presentations and discussions will focus on the crucial problems to be solved in exploiting the secretory immune system to combat dental caries The published proceedings will bring these to the attention of the research community quickly and hopefully they will stimulate new investigators to bring their talents to these problems This meeting will to a large extent determine the direction of research sponsored by the NCP Finally I would like to thank the members of the planning committee for their dedicated efforts over the past two years which have culminated in this symposium Our thanks are also due to each of you in advance for contributing so freely to the success of this meeting

**Advances in Mucosal Immunology** S. Challacombe, P. Bland, C. Stokes, A. Heatley, A. Mowat, 2012-12-06 The immunology of mucosal surfaces is one of the most exciting and relevant areas of medical veterinary and dental research since it applies basic research to tissues involved in everyday defence against microbes and against environmental and food antigens This book is based on the contributions presented at the International Congress of Mucosal Immunology held in London in July 1989 and organised by the Mucosal Immunology Affinity Group of the British Society for Immunology The meeting was attended by over 500 delegates from 27 countries including virtually all of the leading investigators in the field The contents give comprehensive and up to date information on such topics as antigen presentation and processing in the gut mucosal vaccines in man and animals HIV infection in the gut the role of T cells in the gut epithelium recent advances in inflammatory bowel disease and coeliac disease the role of cytokines in the regulation of the IgA response mucosal mast cells and cell migration The contributions reflect the rapid pace of research in mucosal immunology and the great strides which are taking place in the understanding of the immunology molecular biology and biochemistry of host response at mucosal surfaces

*The Secretory immunologic system*, 1971 **Handbook of Mucosal Immunology**, 2012-12-02 Researchers have recently made tremendous progress in the area of mucosal immunology greatly increasing our understanding of the common mucosal immune system mucosal infections and oral immunization However this research has not previously been made available in a single work In its large 81 x 11 format Handbook of Mucosal Immunology covers the entire spectrum of mucosal immunity and is organized in two main sections to present the basic biology of the common mucosal immune system and the immune responses of the mucosae The first section provides an introduction and historical perspective of the mucosal immune system and includes comprehensive discussion of the development and physiology of

mucosal defense It discusses such topics as the structure and function of the mucosal epithelium characteristics of mucosal associated lymphoid tissue MALT Peyer's patches and concepts of mucosal vaccines The second section focuses on the secretory immune system with special reference to mucosal diseases in the digestive GALT respiratory BALT and genitourinary tracts This information is especially important in light of the current interest in the mechanisms transmission and prevention of infectious diseases such as AIDS hepatitis and tuberculosis Virtually all chapters have been authored by the original investigators responsible for key observations on which current concepts are based This handbook will be an invaluable resource for a diverse group of both researchers and practicing clinicians Molecular biologists immunologists veterinarians public health workers physicians in specialties from pediatrics to pulmonology and graduate students of mucosal immunology will all find this handbook the most complete work on the subject

Suddick, 1973 *Principles and Methods for Assessing Direct Immunotoxicity Associated with Exposure to Chemicals* World Health Organization, 1996 A comprehensive guide to general strategies and specific methods for testing the immunotoxicity of chemicals in animal models and humans Addressed to those seeking a basic introduction to the field as well as specialist researchers the book takes its focus from growing concern in scientific and public communities about the capacity of environmental agents to disrupt normal immune functions and thus increase susceptibility to tumours and infectious diseases Compounds known to adversely affect the immune system are numerous and include drugs pesticides solvents halogenated and aromatic hydrocarbons and metals The book draws on considerable recent progress in understanding the immunological consequences of chemical insults as well as increasingly sophisticated methodologies for assessing such effects Close to 1000 references are included in this authoritative guide The book opens with a detailed basic introduction to immunotoxicology An extensive explanation of the function histophysiology and pathophysiology of the immune system emphasizes features that can aid the understanding and interpretation of the pathological changes caused by immunotoxic insults Chapter two on the health impact of selected immunotoxic agents gives illustrative examples for some 30 chemicals that have been shown to exert immunotoxic effects in laboratory animals and for an additional seven groups of chemicals known to disturb immune functions in humans For each brief discussions illustrate the chemical's distinct immunosuppressive properties and the mechanisms by which it exerts its toxic effects on the immune system Chapter three provides detailed descriptions of a number of tests used in a tiered approach to the assessment of immunotoxicity Against this background specific nonfunctional and functional tests for the assessment of immunotoxicology in experimental animals are presented and

explained in full detail Information on individual tests includes an explanation of why the test is important the types of data it can yield and exactly how it should be performed Also included are sections offering advice on assessments in non rodent species in vitro approaches and approaches using biomarkers in epidemiological studies and monitoring The chapter concludes with a discussion of good laboratory practices for immunotoxicology studies and procedures for the validation of tests Chapter five explains the much more complicated procedures needed to assess immunotoxicity in humans An explanation of general questions to be considered when designing epidemiological studies is followed by presentation of three recommended testing schemes proposed by WHO and other agencies for preliminary evaluation of individuals exposed to immunotoxicants Specific assays for assessing immune status are also described The final chapter outlines a step by step process of risk assessment specific to the evaluation of potentially immunotoxic chemicals
