Shifting Logic In Area Development Practices:

Urban Growth and Land Degradation in Developing Cities Roy Maconachie, 2016-02-11 The peri urban interface in poor countries is frequently an area of great dynamism and a focus of competition for basic resources In Nigeria peri urban livelihood strategies have become an increasingly important survival mechanism in the context of rapid urban growth This book uses an innovative combination of methodologies from both the natural and social sciences to examine recent developments in and around the city of Kano in northern Nigeria and in doing so provides insights into the sustainability of these livelihood strategies Identifying some of the most significant forces that are currently shaping the process of peri urban change it argues that despite the adoption of creative and ingenious strategies by many farmers urban growth is having a considerable effect on the livelihood resilience of individuals households and communities The findings presented in this book have much wider relevance and are transferable to other burgeoning Third World cities where increased pressures on urban hinterlands have intensified contests amongst various actors made access to resources much more difficult and made traditional smallholder mechanisms of adaptation and resilience increasingly challenging

Pastures of Change Gillian G. Tan, 2018-04-26 This book offers a novel examination of socio environmental change in a nomadic pastoralist area of the eastern Tibetan plateau Drawing on long term fieldwork that underscores an ethnography of local nomadic pastoralists international development organisations and Chinese government policies the book argues that careful analysis and comparison of the different epistemologies and norms about change are vital to any critical appraisal of developments often contested on the grasslands of Eastern Tibet Tibetan nomads have developed a way of life that is dependent in multiple ways on their animals and shaped by the phenomenological experience of mobility These pastoralists have adapted to many changes in their social political and environmental contexts over time From the earliest historically recorded systems of segmentary lineage to the incorporation first into local fiefdoms and then into the Chinese state of both Nationalist and Communist governments Tibetan pastoralists have maintained their way of life complemented by interactions with the outside world Rapid changes brought about by an intensification of interactions with the outside world call into question the sustained viability of a nomadic way of life particularly as pastoralists themselves sell their herds and settle into towns This book probes how we can more clearly understand these changes by looking specifically at one particular area of high altitude grasslands in the Tibetan Plateau

Conflict and Change in Australia's Peri-Urban Landscapes Melissa Kennedy, Andrew Butt, Marco Amati, 2016-03-22 In an era of rapid urbanization peri urban areas are emerging as the fastest growing regions in many countries Generally considered as the space extending one hundred kilometres from the city fringe peri urban areas are contested and subject to a wide range of uses such as residential development productive farming water catchments forestry mineral and stone extraction and tourism and recreation Whilst the peri urban space is valued for offering a unique ambiance and lifestyle it is often highly vulnerable to bushfire and loss of biodiversity and vegetation along with threats to farming and food security in highly productive areas Drawing together leading researchers and practitioners this volume provides an interdisciplinary contribution to our

knowledge and understanding of how peri urban areas are being shaped in Australia through a focus on four overarching themes Peri urban Conceptualizations Governance and Planning Land Use and Food Production and Solutions and Representations Whilst the case studies focus on Australia they advance a variety of tools useful in discerning processes and impacts of peri urban change globally Furthermore the findings are instructive of the issues and tensions commonly encountered in rapidly urbanizing peri urban areas throughout the world from landscape valuation and biosecurity concerns to functional adaptation and social change

Revitalizing Urban Neighborhoods William Dennis Keating, Norman Krumholz, Philip Star, 1996 Since the 1950s and the advance of urban renewal local governments and urban policy have focused heavily on the central business district However such development has all but ignored the inner city neighborhoods that continue to struggle in the shadows of high rise America This analysis of urban neighborhoods in the United States from 1960 to 1995 presents fifteen essays by scholars of urban planning and development Together they show how urban neighborhoods can and must be preserved as economic cultural and political centers

Challenging the Growth Machine Barbara Ferman, 1996 Economic development and urban growth are the contested grounds of urban politics Business elites and politicians tend to forge pro growth coalitions centered around downtown development while progressive and neighborhood activists counter with a more balanced approach that features a strong neighborhood component Urban politics is often shaped by this conflict which has intellectual as well as practical dimensions In some cities neighborhood interests have triumphed in others the pro growth agenda has prevailed In this illuminating comparative study Barbara Ferman demonstrates why neighborhood challenges to pro growth politics were much more successful in Pittsburgh than they were in Chicago Operating largely in the civic arena Pittsburgh s neighborhood groups encountered a political culture and institutional structure conducive to empowering neighborhood progressivism in housing and economic development policymaking In contrast the pro growth agenda in Chicago was challenged in the electoral arena

which was dominated by machine ward based politicians who regarded any independent neighborhood organizing as a threat. Consequently neighborhood demands for policymaking input were usually thwarted. Besides revealing why the development policies of two important American cities diverged, Ferman's unique comparative approach to this issue significantly expands the scope of urban analysis. Among other things, it provides the first serious study to incorporate the civic sector, neighborhood politics as an important component of urban regimes. Ferman also emphasizes institutional and cultural factors often ignored or relegated to residual roles in other studies and expounds on their influence in shaping local politics and policy. To add an analytical and normative dimension to urban analysis, she focuses on the non elite actors, not just the economic and political elites who compose governing coalitions. Ultimately, Ferman takes a more holistic and balanced view of large cities than is typical for urban studies, as she argues that neighborhoods are an important integral part of what cities are and can be. For that reason, especially, her work will have a profound impact upon our understanding of urban politics.

Logic: Logical methods Christoph Sigwart, 1895 Rangelands, 1993 **Logic** Christoph Sigwart, 1895 **The Politics of Urban Development** Clarence Nathan Stone, Heywood T. Sanders, 1987. In the past twenty years, the study of urban politics has shifted from a predominant concern with political culture and ethos to a preoccupation with political economy, particularly that of urban development. Urban scholars have come to recognize that cities are shaped by forces beyond their boundaries. From that focus, have emerged the views that cities are clearly engaged in economic competition; that market processes are shaped by national policy decisions, sometimes intentionally and sometimes inadvertently; and that the costs and benefits of economic growth are unevenly distributed. But what else needs to be said about the policies and politics of urban development? To supplement prevailing theories, *The Politics of Urban Development* argues that the role of local actors in making development decisions merits closer study. Whatever the structural constraints, politics still matters. Collectively, the essays provide ample evidence that local government officials and other community actors do not simply follow the imperatives that derive from the national political economy; they are able to assert a significant degree of influence over the shared destiny of an urban population. The impact of the collection is to heighten awareness of local political practices and of how and why they make a difference.
