policy analysis and participant observation at two PGD centers in the United Kingdom Born and Made provides an in depth sociological examination of the competing moral obligations that define the experience of PGD Among the many novel findings of this pathbreaking ethnography of reproductive biomedicine is the prominence of uncertainty and ambivalence among PGD patients and professionals a finding characteristic of the emerging biosociety in which scientific progress is inherently paradoxical and contradictory In contrast to much of the speculative futurology that defines this field Born and Made provides a timely and revealing case study of the on the ground decision making that shapes technological assistance to human heredity
